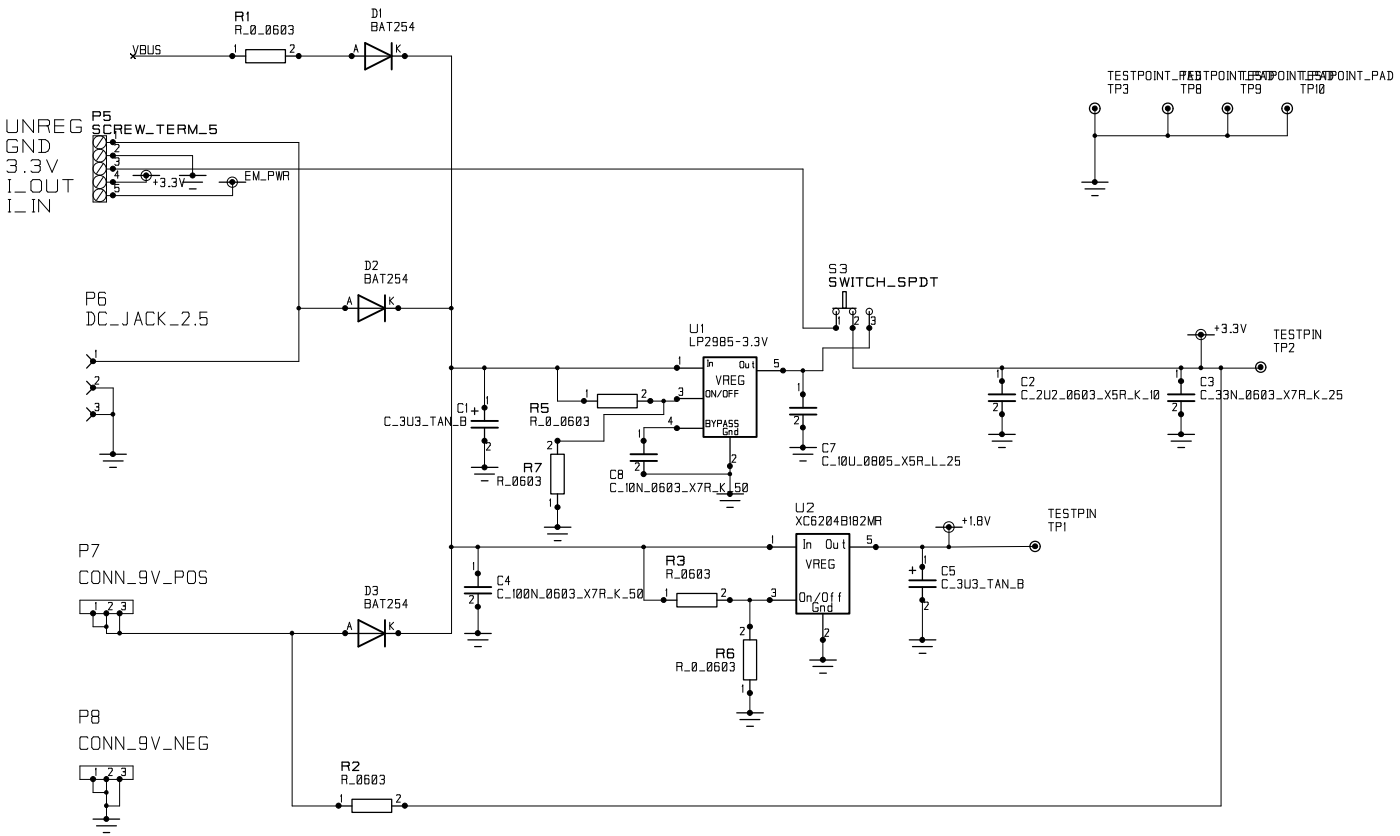
Current is drawn from input with highest voltage



Mount R2 to run directly from two AA or AAA cells.
Important: Do NOT connect a battery with voltage > 3.6V if this resistor is mounted!

Remove R5 and mount R7 to disable 3.3V regulator for minimum power consumption when running directly from two AA or AAA cells

Remove R6 and mount R3 to enable 1.8V regulator when using EB with CC2400.
